

Instructions for completing the document:

Complete **only the fields** that you will find in each of the sections.

Do not alter the format.

If any clarification on the project is necessary, a comments section is provided at the end of the document.

Submit the project idea description as a **editable Word** to the address:

Socios beneficiarios:

Cofinanciador:

ESTÁNDAR ANDALUZ DE CARBONO AZUL

1. PROJECT DETAILS

1.1. Summary Description of the Project

Entities involved	
Project Proponent(s) ¹	
Organization name	
Organizational category (Private/Public)	
Address	
Contact Person	
Organization sector type <i>(Describe in not more than 5 lines)</i>	
Telephone	
Email	
Website	
Other entities involved ²	
Role in the project	
Organization name	
Organization Main Activities <i>(Describe in not more than 5 lines)</i>	
Address	
Contact Person	
Telephone	
Email	
Website	
Notifications <i>Provide the contact information for notification of the Project.</i>	
Contact person (Name and Email)	
Telephone	

Provide a summary description of the project to enable an understanding of the nature of the project and its implementation, including the following (no more than one page):

- Objective of the project
- Summary of the technology to be employed.
- Location
- Estimate emissions removals
- Identify and justify the previous scenario before the Project start.

1.2. Entities involved in the project

¹ The **Project proponent** is the main answerable to the Junta de Andalucía for all contractual obligations and for providing information throughout the development of the Project.

² Role of other Project Proponent:

- a. Project Operator
- b. Owner of the site or project

1.3. Baseline Scenario

Identify and justify the baseline scenario, in accordance with the procedure set out in the applied methodology:

- Evidence of the state of the area to be restored / conserved before the start of the project (photographs, bibliography, etc.)
- Describe the procedure for quantification of baseline removals in accordance with the applied methodology.
- Environmental Risks on Baseline Scenario. Summarize any environmental impact assessments carried out with respect to the project, where applicable.

1.4. Project Activity

Provide a detailed description of the project design including:

- Project location.
- Project Start Date and Credition Period.
- Technology to be employed.
- Actions to solve the risks identified in the pre-project scenario.

1.5. Project lifetime

Indicate, and provide justification for:

- The project start date, specifying the day, month and year
- Project crediting period (Expected Schedule).

1.6. Compliance

Identify and demonstrate compliance of the project with all laws, regulatory frameworks and technical characteristics required by the Junta de Andalucía for Blue Carbon Projects.

1.7. Ownership and land transfer

Justification of the mechanisms by which the Project Promoter is granted the land for its conservation / restoration.

-
- c. Owner of the emission reductions
 - d. Seller of the emission reductions
 - e. Project advisor/consultant
 - f. Project investor
 - g. Other, please specify: _____

1.8. Finance

Provide a detailed description of the project's financial information including:

- *Indicate the total capital cost taking in account the development costs, installed costs and others.*
- *Knockdown cost: Total Capital cost divided by metric tons of CO₂-equivalent (project lifetime), please attach calculations.*
- *Sources of Carbon Finance: Name of carbon financiers carbon funds that your are contacting (if any).*

1.9. Barriers to project implementation

Justification of the environmental, social and economic barriers identified for the implementation of the project.

1.10 Additional Information Relevant to the Project

Indicate any additional information relevant to the Project.

2. APPLICATION OF METHODOLOGY

2.1. Title and Reference of Methodology

Demonstrate and justify how the project activity meets each of the applicability conditions of the methodology, and tools applied by the project.

2.2. Project Boundary

Define the project boundary and identify the relevant GHG sources, sinks and reservoirs.

2.3. Escenario base

Identify and justify the baseline scenario, in accordance with the procedure set out in the applied methodology and any relevant tools.

Explain and justify the assumptions, estimates and methodological options chosen. Provide all relevant references.

2.4. Additionality

Demonstrate and assess the additionality of the project, in accordance with the applied methodology.

3. QUANTIFICATION OF GHG EMISSION REMOVALS

3.1. Baseline removals

Describe the procedure for quantification of baseline emissions and/or removals in accordance with the applied methodology.

Include all relevant equations, and explain and justify all relevant methodological choices (e.g., with respect to selection of emission factors and default values).

Justify all the parameters used in the methodology for calculating the removals and / or emissions of the base scenario using the following tables. Copy and paste the table as many times as necessary.

Data / Parameter:	
Data unit:	
Description:	
Value applied:	
Source of data:	

3.2. Project removals

Describe the procedure for quantification of Project scenario emissions and/or removals in accordance with the applied methodology.

Include all relevant equations, and explain and justify all relevant methodological choices (e.g., with respect to selection of emission factors and default values).

Justify all the parameters used in the methodology for calculating the removals and / or emissions of the Project scenario using the following tables. Copy and paste the table as many times as necessary.

Data / Parameter:	
Data unit:	
Description:	
Value applied:	
Source of data:	

3.3. Net GHG Removals

Describe the procedure for quantification of net emissions and/or removals in accordance with the applied methodology. Include all relevant equations, and explain and justify all relevant methodological choices.

Project Document

Provide the ex-ante calculation (estimate) of baseline emissions/removals, project emissions/removals, leakage emissions and net GHG emission reductions and removals in the table below.

For data and parameters monitored, use estimates. Document how each equation is applied, in a manner that enables the reader to reproduce the calculation.

Baseline removals (t CO ₂ -eq)	
Project removals (t CO ₂ -eq)	
Net GHG Removals (t CO ₂ e)	

4. MONITORING

4.1. Monitoring Plan

Describe the process and schedule to obtain, record, compile and analyze the monitored data and parameters, established according to the methodology. Include details on the following:

- *The methods to measure, record, store, add, collate and report data and parameters. Where relevant, include procedures for calibrating monitoring equipment.*
- *The organizational structure, responsibilities and competencies of the personnel who will carry out the monitoring activities.*
- *Policies for supervision and accountability of monitoring activities.*
- *Internal audit procedures.*
- *Procedures for handling non-conformities with the validated monitoring plan.*

5. ENVIRONMENTAL IMPACTS OF THE PROJECT AND ITS CONTRIBUTION TO SUSTAINABLE DEVELOPMENT GOALS

Describe how the project contributes to achieving any nationally stated sustainable development Goals of United Nations.

Summarize any environmental impact assessments carried out with respect to the project, where applicable.

Describe how the execution of the project contributes to the fulfillment of the sustainable development Goals of United Nations.
